

Where does the loop lead?

The Great INCIRCULAR Plastic Metamorphosis Explained

Name:

INCIRCULAR Composite Pellets

What is it?	Recycled polypropylene reinforced with post-consumer waste fibres.
What is it made of?	Recycled Polypropylene originating as a secondary material from GORENJE industrial processes combined with natural cellulose fibres recovered from post-consumer waste stream.
What is it for?	Initiated for technical applications (solid plastic parts) by injection moulding process.
At what stage of the recycling process is it located?	Pellets are produced via extrusion compounding process.
